illumineX

Software Engineer / Contractor, Nov 2021 - Present, Remote

- Rewrote Natural Language Processing engine for mīstro AI trading system, added over a thousand test cases
- Built a new system called first.then.next with AI and a calendar to support people's independence and success

Stairwell

Software Engineer, Apr 2021 - Oct 2021, Remote

- Added a new malware ingester

Speakeasy

Cofounder, Apr 2020 - Apr 2021, Remote

- Handled all technical aspects of creating a new video events platform that can run events with over 300 participants at once
- Worked with three cofounders in Australia on business, landing a first customer running multiple events per week often with hundreds of guests

YouLi (youli.io)

Contractor, Dec 2019 - Present, Remote

- Created the YouLi Trip mobile app for iOS and Android, making trip pages available offline

Google

Software Engineer, Apr 2016 - Mar 2019, San Francisco, CA

Aug 2017 - Mar 2019: Go Cloud team

- Released a portable pubsub API

Apr 2016 - Aug 2018: App Engine Runtimes team

- Launched php72 runtime beta (news.ycombinator.com/item?id=17810591)

VideoSurf

Software Engineer, Oct 2010 - Sep 2012, San Mateo, CA

- Wrote and deployed daemons to find duplicate videos and map them to a catalog via fuzzy text matching
- Sped up key textmining operations such as deduplication by thousands of times by making better use of the Postgres database, enabling updates of the whole site
- Added automated reports on data structuring quality
- Improved textminer performance from multiple seconds per video to 50 msec per video

YouTube

Software Engineer, Dec 2008 - Oct 2010, San Bruno, CA

- Designed a dependency tracking system for denormalized view generation
- Added atomic updating of sharded tables in a data warehouse
- Wrote a suite of sawzall scripts for abuse detection
- Added a feature to neutralize mass-produced spam accounts without alerting the spam farmers who make them
- Implemented a feature that combats brute-force password attacks
- Eliminated YouTube's problem with chain comments
- Added filters for comment spam and personal message spam

Google

Support Engineer, May 2007 - Nov 2008, Mountain View, CA

Ad Spam Operations team

- Developed a new phone verification system with a failure rate less than one quarter of the legacy system it replaced
- Developed a new GWT-based UI for spam investigations
- Fought spam in the Google AdSense network by analyzing traffic on publisher sites

UC Davis

Programmer IV 2002 - 2006, Davis, CA

- Wrote a desktop client application to view brain cross sections together as stacks in 3D
- Developed an algorithm to compute probabilities of connections between pairs of brain areas from sparse experimental data

- Wrote Mac applications to align and unwarp images for 3D reconstruction

Idol Minds

Programmer, 2001 - 2002, Boulder, CO

- Adapted an algorithm for triangle mesh simplification to enhance rendering performance of a Playstation 2 game

NASA Ames Research Center

Intern, June 1999 - September 1999, Mountain View, CA

- Investigated an edge-collapse algorithm for simplifying tetrahedral meshes with associated scalar fields

Education

- Brown University: M. Sci, Applied Mathematics (1999 - 2000)
- University of California, Davis: B.S., Mathematics (1994 - 1999)
